Subject: Vehicle verification - 2023 Honda City ZX (MH02QA76213)

Reference TD-RPT-708BA3301684 | TrustDrive ID TD-2023-3395 | VIN 1HGCR2F83QA076213

Dear Sir / Madam,

This report sets out the results of a documentary verification of the above vehicle, carried out by TrustDrive Verification Authority on 06 November 2026. It records the evidence examined, the checks completed, the findings that remain open, and the limits of those checks. The trust score is deterministic: the same records always produce the same score, and no language model sets it.

TRUST SCORE	RISK SCORE	EVIDENCE COVERAGE	DOCUMENTS VERIFIED
0 /100 HIGH RISK	100/100	0%	0 of 1
	OPEN FINDINGS	REPORT TYPE	GENERATED
	0	Vehicle verification	06 November 2026

01 PURPOSE AND SCOPE

TrustDrive examined the documents supplied for this vehicle, the odometer readings on record, damage and accident disclosures, the recorded event history, and the supported theft and insurance checks. Each statement below is tied to a stored record or is explicitly labelled as a seller disclosure. Absence of a record is reported as unverified coverage, never as proof that nothing happened.

This letter is informational. It is not a guarantee of mechanical condition, a valuation, or a legal opinion, and it does not replace a physical inspection.

02 VEHICLE PARTICULARS

Make, model and year	2023 Honda City ZX
Registration number	MH02QA76213
VIN	1HGCR2F83QA076213
TrustDrive ID	TD-2023-3395
Category / colour	Sedan / Obsidian Blue
Fuel / transmission	Petrol / Automatic
Odometer (claimed)	18,500 km
Ownership count	1
Location	Mumbai, Maharashtra
Condition (seller)	Good
Asking price	INR 11,95,000
Seller	Darak Motors (KYC verified)

03 VERIFICATION SUMMARY

The vehicle scores 0/100 (High risk) with 0% evidence coverage and 100 risk points. 0 of 1 supplied documents are verified.

Check	Status	Observation
Theft record	unavailable	No theft registry is configured - this check could not be c...
Accident history	unavailable	No independent accident source is configured - unverified c...

Check	Status	Observation
Odometer check	pending	Only seller-declared mileage exists - no independent readin...
Documents	pending	100% of required document weight needs attention

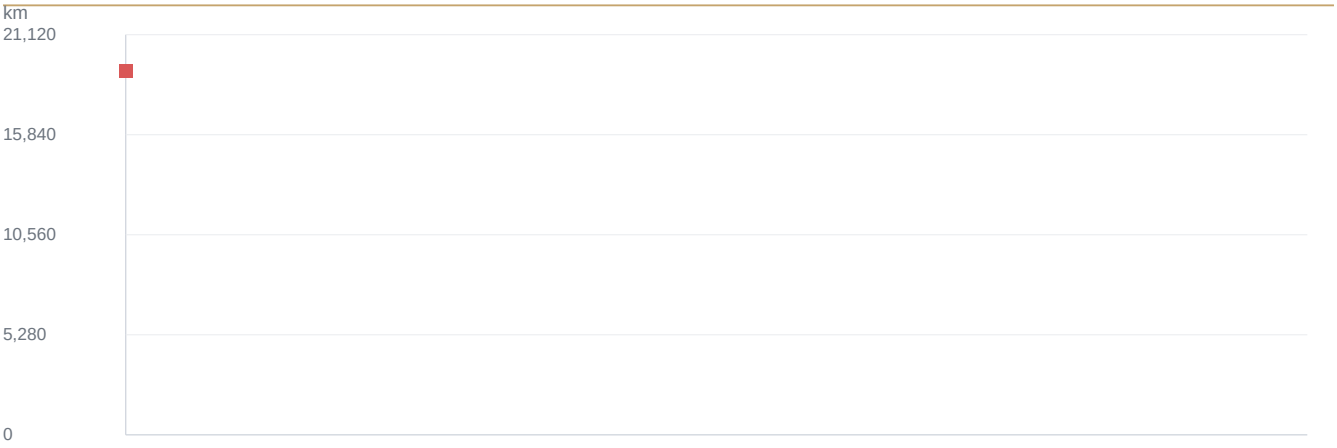
Trust bands: Strong 85-100, Moderate 65-84, Caution 40-64, High risk below 40. The band is a summary of evidence coverage and open findings, not a prediction of reliability.

04 DOCUMENTS EXAMINED

Type	File	Ver	Status	Consent	Uploaded
INSURANCE	qa_policy_1793968083772.pdf	v1	needs_correc...	shared	06 Nov 2026

Verified documents are immutable: a correction is stored as a new version linked to the previous one, and the earlier version remains in the audit chain. Full SHA-256 digests are printed in Annexure A.

05 ODOMETER AND MILEAGE



Year	Date	Odometer	Source	State
2026	06 Nov 2026	19,200 km	seller_portal	unverified

A rollback is flagged when a later reading is materially lower than an earlier one. A jump is judged against the vehicle's own recorded rate, not a generic average. Seller-submitted readings stay unverified until a document supports them.

06 DAMAGE AND ACCIDENT DISCLOSURES

front-left-door - Minor - Repaired

2026-08-15 | status pending

QA: minor parking scrape on lower door lip

Damage visibility is limited to seller disclosures and records found in supported sources. New entries remain pending until reviewed.

07 RECORDED EVENT HISTORY

Date	Event	Odometer	Source	Status
10 Sept 2026	QA 1793968090524 30000km Scheduled Ser...	30,200 km	seller_submitted	pending

08 THEFT AND INSURANCE STATUS

No theft check is available for this vehicle.

Insurance document qa_policy_1793968083772.pdf (needs_correction)

Insurer -

Policy number	-
Valid to	-
IDV	-

A 'no record' theft result is exactly that: no match in the supported adapter. It is not a national guarantee, and an unavailable adapter is disclosed rather than treated as clean.

09 FINDINGS AND REQUIRED ACTIONS

Findings are produced by versioned deterministic rules. An explained finding has been answered by evidence and is excluded from the open count; it is still disclosed here in full.

No findings were raised from the available sources.

10 RECORD INTEGRITY AND HASH CHAIN

CHAIN INTACT

Records chained	4
Chain verification	Every record links to its predecessor.
Latest record hash	b13bdc6b3a6f941986aa3780e960853126c16294dae90e8878f08115da0eb78a
Snapshot SHA-256	199e197b4b8e987fd683db24d5b2c30b6a5e2d25fbaafc7db06fa765b8897ed7

Each record hashes its canonical JSON together with the previous record's hash. This is tamper-evident, not tamper-proof: it proves the records you hold match the records that were written. A matching hash proves file integrity, not document authenticity.

11 MARKET ESTIMATE

No market estimate was prepared for this vehicle.

12 LIMITATIONS AND BASIS OF ISSUE

1. Theft status depends on the supported registry adapter. 'No record' is not a national guarantee.
2. Accident and damage history is limited to disclosed records and supported sources.
3. Odometer readings are verified only where a document supports them; seller claims stay unverified.
4. Document checks detect internal inconsistencies, not forged physical paper.
5. Unverified or missing documents: insurance: needs_correction.
6. No mileage readings are flagged.
7. This letter is informational. It is not a valuation, a guarantee, or a legal opinion.

Method: rules v1.0, deterministic. Coverage weights: RC 30, PUC 22, service 20, ownership 10, inspection 10, insurance 8. Severity points: critical 40, high 25-30, medium 8-12, low 5-8. Bands: Strong 85+, Moderate 65-84, Caution 40-64, High risk below 40.

13 CERTIFICATION AND AUTHORISED SIGNATURE

I certify that the records summarised in this letter were examined on the date of issue, that the findings and limitations stated are those produced by the deterministic rules engine, and that no check described as unavailable has been presented as complete.

Authorised Signatory

TrustDrive Verification Authority

Digitally issued 06 November 2026 at 06:06 pm IST

This certificate is issued electronically. The mark above is a system-generated attestation, not a handwritten signature; its authenticity rests on the QR verification link and the SHA-256 snapshot hash, not on the mark itself.

SCAN TO VERIFY

ANNEXURE A - EVIDENCE REGISTER

Every document examined is listed with its stored digest. The digest is a SHA-256 of the stored bytes and can be recomputed from the original file.
